

Homeopathic Treatment for Sleep Disorders

Didier GRANDGEORGE MD, Fréjus, France, March 12th 2016

General Principles:

Sleep is like a little death: the body falls asleep and the soul is wandering. Sleep disorders are often related to a fear of death, a sequel of mourning. Sometimes they represent an inability to separate from a love fusion with a parent.

This is often the case after a stressful pregnancy, for a baby too long desired, or conceived using modern techniques of assisted reproduction (with or without a gamete donor). In all cases a baby over 3 months must always sleep in his room and the bedtime ritual should be brief. Stop on the syndrome of "goodbye" that drags on as if we will never see each other again.

We fall into a sleep deeper and deeper every 2-3 hours but there is a brief revival which we do not remember. As result, any child who falls asleep in the arms will require arms every three hours to get back to sleep!

If the child sleeps poorly and suckle a pacifier or a bottle (which represents mom's breast), you have to go with the child to throw them in the trashcan with Dad. Give him instead a gift! At 18 months the child leaves the oral stage. So turn down the pacifiers and baby bottles. Otherwise the face deformed and the child cannot go to the anal stage and become clean.

In case of thirst during night, do not give the child a bottle of milk or any sweetened liquid otherwise the teeth will destroy itself with multiple cavities!

Usefull Homeopathic Remedies

ACTEA RACEMOSA 15CH : insomnia in pregnant women, afraid of giving birth, fear of having an abnormal child.
